(54) APPARATUS FOR TREATING ORGANIC WASTE

(57)Abstract:

PROBLEM TO BE SOLVED: To obtain an apparatus for treating organic waste which has high agitation/crushing efficiency, is capable of the fine drying treatment of the organic waste in a short time, and is low in running costs and simple in structure.

SOLUTION: A heater 36 is arranged on the peripheral surface of the lower part wall surface of a treatment tank 1, an agitation rotor 10 fitted with inclined agitation blades reciprocating in the axial direction of the tank 1 to convey organic waste while agitating/crushing the waste is installed in the tank 1. By setting the fitting angle of the blades in the vicinity of the end parts in the axial direction of the tank 1 smaller than that in the middle part, garbage charged into the treatment tank 1 can be treated uniformly without being collected in both end parts of the tank 1.
